

Build. Operate. *Maintain.*

How Elishah, our product partner and our industry partners take private enterprise AI into energy and industry, and how we share what we earn.

PREPARED FOR
DIMUTHU & OUR INDUSTRY PARTNER

PRESENTED BY
JOEL TONG, ELISHAH

DATE
SEPTEMBER 2026

STATUS
CONFIDENTIAL · FOR DISCUSSION

Three things to agree before the first meeting with a customer.

01 · POSITION

What we sell, and to whom

One product to open doors, a narrow set of buyers, and a clear list of things we don't do.

02 · OPERATING MODEL

Who does what

Three roles behind one Elishah contract. The deal stages, and two ways to sell: BO or BOM.

03 · ECONOMICS & PROTECTION

How we get paid

A 10% platform reserve, a 50 / 25 / 25 profit split earned by activity, IP rules, and protections for each partner.

01

Position

We are not an oil-and-gas engineering consultancy. We build the software around the operation.

Elishah builds the digital, payments and AI infrastructure around industrial operations.

WHERE WE PLAY

- Private knowledge AI over manuals, SOPs, work orders and contracts
- AI gateway: permissions, model routing, approvals, audit
- B2B billing, settlement and reconciliation (the layer between commercial systems and SAP)
- Fuel, fleet and EV payments
- Procurement leakage: contract ↔ PO ↔ receipt ↔ invoice

WHERE WE PARTNER, NOT COMPETE

- Reservoir modelling and seismic interpretation
- Drilling optimisation
- Refinery process control, SCADA, autonomous plant control

That work takes decades of process engineering. SLB, Baker Hughes, Honeywell, Siemens, ABB and Yokogawa own the domain. We build the software around it.

Elishah Intelligence: *ask your entire company, securely.*

A private, ChatGPT-style system that runs inside the customer's own infrastructure and answers from their own knowledge. Claude and ChatGPT are used only where company policy allows.

01 • CONNECT

SharePoint, drives, Confluence, databases, ERP exports, email archives

02 • UNDERSTAND

PDFs, scans, spreadsheets, drawings, contracts, tables

03 • RETRIEVE

Keyword + semantic + metadata search, with re-ranking

04 • ANSWER

Every answer cites the source document it came from

05 • CONTROL

If you can't open the file, the AI can't tell you what's in it

06 • AUDIT

Who asked what, which model answered, what left the building

The customer owns the platform. The model is a replaceable supplier.

FOUR DEPLOYMENT MODES, ONE CODEBASE

Air-gapped

Everything on-prem. No internet.

Private VPC

Customer cloud, dedicated GPUs.

Hybrid

Sensitive work stays local; approved tasks go to frontier models.

Frontier-first

Frontier models do most inference. Knowledge, permissions and audit stay with the customer.

Every path: cited answer + audit record.

Aramco and ADNOC are logos #20–50, not #1.

The majors have large in-house AI teams. A US\$1–10B operator has the same problems without a thousand engineers working on them.

TARGET ACCOUNTS

INDEPENDENT OIL COMPANIES

NOC SUBSIDIARIES

REFINERIES

STORAGE TERMINALS

FUEL DISTRIBUTORS

LPG & LUBRICANTS

SHIPPING & BUNKERING

FUEL RETAILERS

OILFIELD SERVICES

EPC CONTRACTORS

INDUSTRIAL DISTRIBUTORS

BUYERS TO REACH

Head of Digital / CTO / COO	Knowledge AI, operations copilot
CIO / CISO	AI gateway, governance, sovereignty
CFO / Procurement	Leakage, billing, reconciliation
Downstream / Mobility	Fleet, fuel card and EV payments

Four named products, not "Joel has a software company".

NOW · THE WEDGE

Elishah Intelligence

Private AI over company knowledge, with agent workflows added later.

NEXT

Elishah Energy Ledger

B2B billing, settlement, reconciliation and treasury, sitting between commercial systems and the ERP.

NEXT

Elishah Mobility

Fuel cards, fleet controls, EV charging, dealer settlement, fraud and consolidated invoicing.

LATER

Elishah Provenance

Methane and carbon evidence packs, shipment by shipment, for Gulf exporters and EU importers.

Intelligence opens the account. Once we're inside, we find the expensive workflows, and those tell us which product to build next or which company to buy.

02

Operating model

We pay for the role, not the person. That keeps working when we have ten industry partners and three delivery teams.

Each role has one owner and a clear set of duties.

ORIGINATION & COMMERCIAL

Industry Partner

- Access and introductions
- Account intelligence
- Handling procurement and politics
- Closing and collection

PRODUCT & SOLUTIONING

Dimuthu

- Discovery and problem framing
- Rapid prototypes and demos
- Pre-sales and proposals
- Introductions to partners (BlackRock network and others)

ENGINEERING & DELIVERY

Joel / Elishah

- Architecture and build
- Forward-deployed engineers
- Engineering capacity in Singapore and Hanoi
- Seeing every project through to completion

IP & PLATFORM

Elishah

- Retrieval engine, gateway, connectors
- Workflow, agents, audit
- Security and upgrades
- Every improvement reused on the next deal

One contract, one counterparty, one party accountable.

- **Elishah signs every contract.** The customer never sees three freelancers working together.
- **Partners are introduced by title:** Elishah Industry Partner, Elishah Product Partner.
- **Elishah owns the IP** and licenses it into each deployment. The IP is never co-owned deal by deal.
- **Partners share in the profit** of the deals they create, shape and support.

Later we can add a regional OpCo or JV (e.g. Elishah Industrial Systems). It would license IP from Elishah and change nothing about how partners are paid.

Every stage is paid. Nothing is built for free.

These price bands are how we package our work, not industry benchmarks. Each customer should fund a reusable piece of Elishah IP. That's what keeps us from becoming a body shop.

BOM keeps us on for years. It's the one we push.

BO

Build + Operate

We build it and run it through launch and hypercare. Then the customer's team takes over.

COMMERCIALS

- Build fee
- Platform licence
- Optional support retainer

Fits: customers with strong internal IT who insist on running it themselves.

BOM · PREFERRED

Build + Operate + Maintain

Elishah stays accountable for deployment, models, monitoring, security patches, connectors, upgrades, SLAs and how the platform evolves.

COMMERCIALS

- Implementation fee
- Annual platform licence
- Managed-service fee
- Usage: GPU and model pass-through plus margin

Why we push it: recurring revenue for all three of us, and it turns consulting into a software asset.

03

Economics

Simple enough to explain over lunch, and precise enough that nobody argues about it later.

We split Project Contribution Profit, and we define it on paper.

Cash collected from customer

START

– Taxes (GST / VAT) & pass-through

– 10% Platform / IP reserve

STAYS IN ELISHAH

– Direct delivery costs

= Project Contribution Profit (PCP)

50 · Engineering

25 · Product

25 · Comm.

ALLOWED DEDUCTIONS (FIXED SCHEDULE)

- Third-party software and licences
- Cloud and GPU costs
- Customer-specific hardware
- Pre-approved travel
- External subcontractors
- Direct FDE and engineering time at agreed rate cards

NEVER DEDUCTED

- "Corporate overhead" or "management fees"
- Anything not listed in the schedule

Open books on every deal. Partners can see every line.

The pools belong to roles, and you earn the points by doing the work.

Engineering 50 Carries the delivery risk: the FDE bench, warranties, support, security, infrastructure, seeing the project through, and ongoing IP investment. Why it's the biggest pool: this is where a failed project costs money. It doesn't mean anyone is worth twice as much.	Product 25 Discovery & solutioning 10 Demo, proposal, prototype 10 Ongoing product ownership 5	Commercial 25 Origination: qualified intro that becomes an opportunity 10 Close: meetings, procurement, contract 10 Account stewardship, expansion, collection 5
--	--	--

Anyone can earn from more than one pool. Handing over a phone number earns less than getting the CEO to sign after nine months of work.

A US\$500k build for a Gulf energy company.

PARTICIPANT	US\$K
● Elishah · Engineering	135.0
● Dimuthu · Product	67.5
● Partner · Commercial	67.5
● Elishah platform reserve	50.0

The reserve is company capital. It pays for platform development, security, models and connectors, and none of it goes to anyone personally. Without it, each deal would pay out everything and nothing would fund the asset.

We reward landing an account and growing it, not introducing it and walking away.

BOM RUN REVENUE: SPLIT OF PCP BY CONTRACT YEAR (PARTNERS ACTIVE)

Engineering's share rises because running and maintaining the system becomes most of the work.

PARTNER STILL ACTIVE

Keeps the active share (20 → 15) for the life of the contract.

PARTNER STEPS BACK

Moves to a 10% commercial tail until the end of Year 3, then zero.

EXPANSION RESETS TO 25

A new subsidiary, country or product the partner creates is a new deal, with a fresh commercial pool. For example, ADNOC → ADNOC Drilling, or UAE → KSA.

The same US\$270k of PCP, four ways a deal happens.

SCENARIO	ENGINEERING	PRODUCT	COMMERCIAL	NOTES
A • Partner works the full cycle Intro, close, stewardship	ELISHAH \$135k	DIMUTHU \$67.5k	PARTNER \$67.5k	Default case: 50 / 25 / 25
B • Partner makes the intro only Someone else closes	ELISHAH \$135k	DIMUTHU \$67.5k	PARTNER \$27k closer \$40.5k	10 origination points; 15 go to whoever closes and looks after the account
C • Dimuthu originates and closes No industry partner involved	ELISHAH \$135k	DIMUTHU \$135k		Product 25 + Commercial 25
D • Joel originates, partner closes Partner handles procurement	ELISHAH \$135k + Joel orig. \$27k	DIMUTHU \$67.5k	PARTNER \$40.5k	10 origination points to Joel; 15 close and stewardship points to the partner

1 point = 1% of PCP = \$2.7k in this example. Everyone agrees the points in writing on the deal schedule before the proposal goes out.

04

IP, protection & governance

What each of us owns, how each of us is protected, and how we stay clean in a high-risk region.

Four IP buckets, written into every MSA.

A • BACKGROUND IP

100% Elishah

Everything Elishah owned before the engagement.

B • PLATFORM IMPROVEMENTS

100% Elishah

Generic work built during a project: retrieval, connectors, model router, workflow. This applies even when the customer paid for it. They get a licence.

C • CUSTOMER-SPECIFIC

Negotiable

Their configuration, workflows, prompts and business rules. Can be licensed exclusively or assigned to them. Elishah keeps the underlying building blocks.

D • CUSTOMER DATA

100% Customer

Documents, embeddings, logs, operational data. No ambiguity, and this is central to how we sell sovereignty.

"WE MUST OWN IT"

We don't lose the deal over this. The customer owns the bespoke deliverables, for example a *MaintenanceWorkflow*. Elishah keeps the *WorkflowEngine*, *DocumentParser*, *ModelRouter* and *SAPConnector*. Sophisticated buyers are used to this arrangement.

Why it's safe to bring us your best relationships.

01

Deal registration

Register an account and buying centre. The date-stamped registration settles who brought it in.

02

Protected accounts: 6–12 months

Nobody in the network goes around you to the same buying centre. Protection covers the opportunity you created, not "all of Aramco, forever".

03

Signed deal schedule before the proposal

Points, pools, tail and reserve are fixed in writing before any money is discussed with the customer.

04

Open books, mutual non-circumvention

Deductions come from a fixed schedule and partners can see every line. Non-circumvention binds all parties, Elishah included.

Four documents. Not twenty.

DOCUMENT	PARTIES · COVERS
1 · Master Collaboration Agreement	Elishah + Dimuthu + each partner. Roles, confidentiality, non-circumvention, IP, deal registration, conflicts, anti-bribery, termination, disputes.
2 · Deal Schedule	One page per opportunity. Points, pools, tail, reserve. Everyone signs before the proposal goes out.
3 · Customer MSA + SOW	Elishah ↔ customer. BO / BOM, scope, SLA, fees, liability, security, data, acceptance.
4 · IP Licence	Usually part of the MSA. Elishah licenses the platform and never assigns it.

DEAL SCHEDULE · DS-2026-001	
Customer	[Gulf Industrial Co]
Offering	BOM · Intelligence
COMMERCIAL · 25	
Origination	[Partner] 10
Close	[Partner] 10
Stewardship	[Partner] 5
PRODUCT · 25	
Dimuthu	25
ENGINEERING · 50	
Elishah	50
TERMS	
IP reserve	10% net revenue
Tail	36 months
Contracting party	Elishah

Every dollar can be traced to documented commercial work.

Gulf energy, state-linked buyers and success fees for intermediaries: regulators look hardest at exactly this combination. Good hygiene here protects the partner as much as it protects Elishah.

KYC & identity

Identity and beneficial-owner disclosure for every partner entity.

Conflicts & officials

Disclosure of any conflicts and of relationships with public officials.

Anti-bribery undertaking

Signed in the MCA and renewed annually.

Documented scope

A written description of the services behind every point earned.

Clean payments

Paid only to the contracted entity and its account, against invoice, with no cash or third-party payments.

Records

Approval authority and audit trail kept in line with US DOJ, UK Bribery Act and Singapore CPIB guidance.

Each partner gets a co-branded kit, so Elishah is their delivery arm.

A partner shouldn't be "introducing my software developer."

They should be saying "**this is my technology delivery arm.**"

THE KIT

- Co-branded tear sheet and microsite page for the partner's own website
- Team profiles: engineering, product, industry
- A 20-second pitch and a 5-slide intro deck
- A demo environment in air-gapped and hybrid modes

ELISHAH × [PARTNER]

Private AI infrastructure for industry

THE TEAM

Joel Tong · Engineering & Infrastructure

Payments and infrastructure engineering, enterprise architecture, delivery organisation.

Dimuthu · Product & Commercialisation

Product development, fast time-to-market, enterprise solutioning.

[Partner] · Industry & Markets

Regional relationships, enterprise access, industry expertise.

WHAT WE DELIVER

- Private knowledge AI
- Enterprise AI gateway
- On-prem AI infrastructure
- AI workflow automation
- Enterprise integrations

DEPLOYMENT

CLOUD

PRIVATE VPC

ON-PREMISE

AIR-GAPPED

HYBRID FRONTIER + LOCAL

You don't need to understand Kubernetes. Listen for pain.

"Which process here takes 30 people and a pile of Excel?"

"Where do you lose millions because three systems don't reconcile?"

"Which new regulation or customer demand are you struggling to meet?"

THE 20-SECOND PITCH

"We deploy a private ChatGPT-style system entirely inside your organisation, grounded in your own knowledge. You control, request by request, whether it uses your own models or frontier models like Claude and ChatGPT."

THEN ASK FOR

The Head of Digital, the CFO, the head of Downstream / Mobility, or the head of Commercial Operations. We send two people to map the workflow and scope a paid Discovery.

Consulting is how we find opportunities. Owning software assets is the end goal.

A small-scale Bending Spoons approach: **acquire** → **modernise** → **add AI** → **distribute** → **hold**. We target founder-owned vertical software with €300k–5m revenue, 10–200 enterprise customers, old technology and no succession plan.

EUROPE

Where we find acquisitions: ageing vendors with 15 years of customers.

GULF

Where they grow: new buyers for proven products.

SG / HANOI

Where they're rebuilt: one shared platform under every product.

FIRST HUNTING LIST

- BUNKER MANAGEMENT
- FUEL-CARD MANAGEMENT
- B2B FUEL BILLING
- FUEL-DISTRIBUTOR ERP
- TERMINAL MANAGEMENT
- TANK INVENTORY
- COMMODITY RECONCILIATION
- PERMIT-TO-WORK
- CONTRACTOR MANAGEMENT
- DOCUMENT CONTROL
- INSPECTION MANAGEMENT
- INVOICE RECONCILIATION

The same economics apply: partners who find a target or a buyer earn from it. Acquisition terms go in their own schedule.

From handshake to first paid Discovery.

Day 0–14

Sign the MCA. Complete KYC. Tear sheet goes live on the partner's site. Register the first 5 target accounts.

Day 15–45

Demo environment running in air-gapped and hybrid modes. Three discovery conversations booked with Digital, CFO or Downstream leads.

Day 46–90

First paid Discovery signed. First deal schedule countersigned. Pilot SOW drafted.

DECISIONS FOR TODAY

1. 10% platform reserve plus a 50 / 25 / 25 PCP split
2. Points schedule: 10 / 10 / 5 in each pool
3. Recurring step-down and a 36-month tail
4. Protected-account window: 6 or 12 months
5. The first 5 target accounts and who owns each

*Partners bring the domain and the doors.
Elishah builds and owns the IP.
Every deal makes the platform more valuable
for all of us.*

THE MODEL

10% RESERVE · 50 / 25 / 25
